

Blocs Password Protect Page Guide

1st Open up Blocs Page Password Protect and type a password into the box and click on the export file button. You can save the file anywhere you want just call it anything and the file type will be added on automatically.

Next go into blocs and open up the desired page that you wish to be password protected.

The go into Page and then settings and add the header file attachment. Click on the plus icon and then navigate the the file that the app created. Click open. Now test the site in your browser and an alert box will popup on screen for you to enter your password into.
